INTRANET AND SELF-SERVICE

SP Employee Hub

Intranet and employee self-service on your Microsoft 365 tenant. Runs inside your GCC or GCC High tenant. Those Microsoft environments meet FedRAMP Moderate and FedRAMP High.

An intranet carries internal announcements, organizational structure, department documentation and the forms that run daily operations. In an agency or a defense contractor, that is close to the last content anyone should place on an external platform.

SP Employee Hub is built on a native SharePoint communication site and extended with web parts and flows. The homepage carries personalized company news, events and recognition, with role-based navigation so employees reach the forms, links and updates that apply to them. Design draws on best practices from more than 1,000 implementations. SP Marketplace has been building customer intranets since 2012.

Doc Central gives one route to policies, procedures, forms and department files, with the Targeted Search web part narrowing results to the libraries that matter. Process Central organizes the workflows and forms tied to a role. Help Central brings departmental help desks into a single portal so employees stop hunting across department sites.

SP Employee Hub in GCC and GCC High TWO DIFFERENT ENVIRONMENTS

GCC

US federal, state, local, tribal and territorial government entities, plus organizations handling government-regulated data such as criminal justice or federal tax information.

GCC High

Hosted in Azure Government for the defense industrial base, and for organizations handling export-controlled data or defense CUI.

COMPATIBLE WITH BOTH

SP Employee Hub installs into your own tenant and runs on SharePoint, Teams, Power Automate and Power BI. In a GCC or GCC High tenant it runs inside that accredited environment and inherits your identity controls, data residency rules, conditional access and audit logging. **Internal communications, department documents and forms, employee directory information and service requests** stay where your other Microsoft 365 content sits, and no third-party cloud is introduced.

KNOWN GCC HIGH CONSIDERATIONS

In GCC High the news web part pulls only from the current site, so cross-site rollup needs reworking. In both GCC and GCC High, the organization assets library is unavailable and web parts reaching external services such as YouTube will not behave as expected. The accreditation belongs to your tenant rather than the application.

Personalized Homepage

Company news, events and recognition with role-based navigation for every employee.

Doc Central

One route to policies, procedures, forms and department files across the organization.

Process Central

Business tasks, forms and workflows organized by the role that needs them.

Help Central

Departmental help desks brought into a single portal for employee requests.

Targeted Search

Administrators set exact search criteria so results stay limited to relevant libraries.

Governance and Roles

A full governance model with predefined roles and automated portal generation.
