ENVIRONMENTAL HEALTH AND SAFETY

SP Safety

EHS incident, inspection and compliance management on your Microsoft 365 tenant. Runs inside your GCC or GCC High tenant. Those Microsoft environments meet FedRAMP Moderate and FedRAMP High.

Safety records in government and defense settings get requested by regulators, inspectors and contracting officers. When incidents are logged in email, spreadsheets and paper forms, the record is incomplete at exactly the moment it carries the most weight.

SP Safety is an EHS system built natively on SharePoint and Microsoft Teams. The safety team works from a Staff Portal covering incidents, observations, corrective actions, audits and inspections. Incidents capture who, what, when, where and why in one place and track through to corrective action and closure.

Observations let hazards be captured and answered before they become incidents. Audits and inspections are scheduled, assigned and reported against attached forms and checklists. Employee certifications, renewals and training are tracked so lapsed credentials do not stop work. Every employee reaches the MySafety Portal to read safety updates, find documents, and report an incident or observation.

SP Safety in GCC and GCC High

TWO DIFFERENT ENVIRONMENTS

GCC

US federal, state, local, tribal and territorial government entities, plus organizations handling government-regulated data such as criminal justice or federal tax information.

GCC High

Hosted in Azure Government for the defense industrial base, and for organizations handling export-controlled data or defense CUI.

COMPATIBLE WITH BOTH

SP Safety installs into your own tenant and runs on SharePoint, Teams, Power Automate and Power BI. In a GCC or GCC High tenant it runs inside that accredited environment and inherits your identity controls, data residency rules, conditional access and audit logging. **Incident records, hazard observations, corrective actions, inspection findings and employee certification records** stay where your other Microsoft 365 content sits, and no third-party cloud is introduced.

KNOWN GCC HIGH CONSIDERATIONS

Scheduled flows behind recurring audits, inspections and certification reminders are unaffected. Approve and reject buttons inside Outlook are unavailable in GCC High, so where corrective actions route for approval, approvers act in the Approvals app in Teams. Certification and inspection reminders are standard email and unaffected. The accreditation belongs to your tenant rather than the application.

Incident Management

Report, monitor and track injuries, illnesses and near misses through to corrective action.

Hazard Observations

Capture hazards organization-wide and respond with corrective actions before incidents occur.

Corrective Actions

Assign, track and manage actions against company, regulatory and industry requirements.

Audits and Inspections

Schedule and assign recurring audits with attached forms and checklists for consistency.

Employee Compliance

Track certifications, renewals and training to avoid work stoppages from lapsed credentials.

Assets and Work Areas

See all safety activity for an asset or work area across incidents, observations and audits.
